

# Timeline of programming languages

This is a record of notable [programming languages](#), by decade.

## Pre-1950

| Year    | Name                                                        | Chief developer, company                                                                                                                                                                                                                                                                                                                                                                                           | Predecessor(s)                  |
|---------|-------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|
| 1804    | <a href="#">Jacquard machine</a>                            | <a href="#">Joseph Marie Jacquard</a>                                                                                                                                                                                                                                                                                                                                                                              | none (unique language)          |
| 1879    | <a href="#">Begriffsschrift</a>                             | <a href="#">Gottlob Frege</a>                                                                                                                                                                                                                                                                                                                                                                                      | none (unique language)          |
| 1943–45 | <a href="#">Plankalkül</a> (year of conceptualization)      | <a href="#">Konrad Zuse</a>                                                                                                                                                                                                                                                                                                                                                                                        | none (unique language)          |
| 1943–46 | <a href="#">ENIAC coding system</a>                         | <a href="#">John von Neumann</a> , <a href="#">John Mauchly</a> , <a href="#">J. Presper Eckert</a> and <a href="#">Herman Goldstine</a> after <a href="#">Alan Turing</a> . The first programmers of ENIAC were <a href="#">Kay McNulty</a> , <a href="#">Betty Jennings</a> , <a href="#">Betty Snyder</a> , <a href="#">Marlyn Meltzer</a> , <a href="#">Fran Bilas</a> , and <a href="#">Ruth Lichterman</a> . | none (unique language)          |
| 1946    | <a href="#">ENIAC Short Code</a>                            | Richard Clippinger and <a href="#">John von Neumann</a> after <a href="#">Alan Turing</a>                                                                                                                                                                                                                                                                                                                          | none (unique language)          |
| 1947–52 | <a href="#">ARC/Birkbeck Assembler</a>                      | <a href="#">Kathleen Booth</a>                                                                                                                                                                                                                                                                                                                                                                                     | ENIAC Short Code <sup>[1]</sup> |
| 1948    | <a href="#">Plankalkül</a> (year of concept publication)    | <a href="#">Konrad Zuse</a>                                                                                                                                                                                                                                                                                                                                                                                        | none (unique language)          |
| 1949    | <a href="#">EDSAC Initial Orders</a>                        | <a href="#">David Wheeler</a>                                                                                                                                                                                                                                                                                                                                                                                      | ENIAC coding system             |
| 1949    | <a href="#">Short Code</a> (originally known as Brief Code) | <a href="#">John Mauchly</a> and William F. Schmitt                                                                                                                                                                                                                                                                                                                                                                | ENIAC Short Code                |
| Year    | Name                                                        | Chief developer, company                                                                                                                                                                                                                                                                                                                                                                                           | Predecessor(s)                  |

# 1950s

| Year    | Name                                       | Chief developer, company                                                              | Predecessor(s)            |
|---------|--------------------------------------------|---------------------------------------------------------------------------------------|---------------------------|
| 1950    | <a href="#">Short Code</a> (for UNIVAC I)  | William F. Schmitt                                                                    | Short Code                |
| 1951    | <a href="#">Superplan</a>                  | <a href="#">Heinz Rutishauser</a>                                                     | Plankalkül                |
| 1951    | ALGAE                                      | Edward A. Voorhees and Karl Balke                                                     | none (unique language)    |
| 1951    | Intermediate Programming Language          | <a href="#">Arthur Burks</a>                                                          | Short Code                |
| 1951    | Boehm unnamed coding system                | <a href="#">Corrado Böhm</a>                                                          | CPC Coding scheme         |
| 1951    | Klammerausdrücke                           | <a href="#">Konrad Zuse</a>                                                           | Plankalkül                |
| 1951    | Stanislaus (Notation)                      | <a href="#">Fritz Bauer</a>                                                           | none (unique language)    |
| 1951    | <a href="#">Sort Merge Generator</a>       | <a href="#">Betty Holberton</a>                                                       | none (unique language)    |
| 1952    | <a href="#">Short Code</a> (for UNIVAC II) | Albert B. Tonik, <sup>[2]</sup> <a href="#">J. R. Logan</a>                           | Short Code (for UNIVAC I) |
| 1952    | <a href="#">A-0</a>                        | <a href="#">Grace Hopper</a>                                                          | Short Code                |
| 1952    | <a href="#">Glennie Autocode</a>           | <a href="#">Alick Glennie</a> after <a href="#">Alan Turing</a>                       | CPC Coding scheme         |
| 1952    | Operator programming                       | Alexey Andreevich Lyapunov with the participation <a href="#">Kateryna Yushchenko</a> | <a href="#">MESM</a>      |
| 1952    | Editing Generator                          | Milly Koss                                                                            | SORT/MERGE                |
| 1952    | COMPOOL                                    | RAND/SDC                                                                              | none (unique language)    |
| 1953    | <a href="#">Speedcoding</a>                | <a href="#">John W. Backus</a>                                                        | none (unique language)    |
| 1953    | READ/PRINT                                 | Don Harroff, James Fishman, George Ryckman                                            | none (unique language)    |
| 1954    | <a href="#">Laning and Zierler system</a>  | Laning, Zierler, Adams at <a href="#">MIT Project Whirlwind</a>                       | none (unique language)    |
| 1954    | <a href="#">Mark I Autocode</a>            | <a href="#">Tony Brooker</a>                                                          | Glennie Autocode          |
| 1954–55 | <a href="#">FORTRAN</a> (concept)          | Team led by <a href="#">John W. Backus</a> at <a href="#">IBM</a>                     | Speedcoding               |
| 1954    | <a href="#">ARITH-MATIC</a>                | Team led by <a href="#">Grace Hopper</a> at UNIVAC                                    | A-0                       |
| 1954    | <a href="#">MATH-MATIC</a>                 | Team led by Charles Katz                                                              | A-0                       |
| 1954    | MATRIX MATH                                | H G Kahrmanian                                                                        | none (unique language)    |
| Year    | Name                                       | Chief developer, company                                                              | Predecessor(s)            |

| Year    | Name                              | Chief developer, company                       | Predecessor(s)                                                                 |
|---------|-----------------------------------|------------------------------------------------|--------------------------------------------------------------------------------|
| 1954    | IPL I (concept)                   | Allen Newell, Cliff Shaw, Herbert A. Simon     | none (unique language)                                                         |
| 1955    | Address programming language      | Kateryna Yushchenko                            | Operator programming – Alexey Andreevich Lyapunov & Kateryna Yushchenko & MESM |
| 1955    | FLOW-MATIC                        | Team led by Grace Hopper at UNIVAC             | A-0                                                                            |
